INDUSTRIAL TRAINING PROGRESS REPORT

(Techno Brain International)

M.JASMAN

(15APC2341)

16th August 2020

Project Description

- Document management systems used to record the document which are sent by the users to the company. Admin can assign the document and view the tracking process. Employees can access the assigned document. And the employees should react as doing or not doing. Employees need to update every process. Employees can transfer the document to admin or other needed department if the admin wrongly assigned.

- Using Laravel Framework, php for this web application.

- I'm started by project from 15th June 2020 and now I'm successfully completed 8 weeks.

List of Task Completed

- Start to learn about Laravel and Bootstrap through YouTube videos and Web sites.

- First create a small sample project then start my project. In this 8 week I create login page and authentication for admin, employee and users connect to My SQL and enter to the main page and start to create functions.

- User can add document function and that document saved to Database.

- Admin and employee can view the document listing.

- They can edit and assign the Document.

- Admin only delete the document or record.
